Is Your Home Ready for Christmas Guests? Seven Household Systems That Could Struggle This Summer

Brisbane, QLD — 6th November 2026

Christmas guests, school holidays and rising summer temperatures can place unexpected pressure on household infrastructure, prompting a reminder for South East Queensland homeowners to check whether their homes are equipped for increased demand.

While festive preparations often focus on shopping, entertaining and decorating, essential systems such as electrical wiring, air conditioning, hot water, plumbing, internet connectivity and kitchen appliances may face some of their busiest weeks of the year.

Queensland multi-trade service experts Fallon Solutions says many common household problems become more noticeable when normal routines change and additional people are using the home.

Fallon Solutions Managing Director Jackson Whipps said modern homes rely on an increasingly interconnected range of services, particularly during summer. "Think about what happens when the family arrives for Christmas. You've got air conditioning running, appliances working overtime, multiple people taking showers, televisions streaming and everyone charging their devices," Mr Whipps said. "Your home has to support all of that activity, often at the same time. If there are already weaknesses in any of those systems, that's when you're more likely to notice them."

Fallon solutions wants to remind homeowners that summer can bring greater use of air conditioning, ceiling fans, pool equipment, kitchen appliances and home entertainment systems. Homeowners should watch for damaged outlets, unreliable switches, frequently tripping circuit breakers and other signs that electrical equipment needs professional assessment. Older switchboards may also warrant inspection to determine whether they remain suitable for the household's electrical requirements and comply with applicable safety requirements.

Christmas guests often arrive with smartphones, tablets, laptops and other connected devices.
Combined with smart televisions, security cameras, gaming consoles and home offices, this can place additional demand on household networks. Weak Wi-Fi coverage, unreliable streaming and connection dropouts may indicate the need to review router placement, network capacity, wireless coverage or fixed data connections.

Mr Whipps said electrical and data infrastructure are increasingly important to how households function. "Reliable connectivity isn't just about watching television anymore. People are working from home, using connected security systems and relying on Wi-Fi throughout the property," he said. "That's why it's worth thinking about your electrical and data needs together rather than treating them as completely separate issues."

Making Larger Home Improvements More Manageable

While some summer maintenance jobs involve relatively minor repairs, others may require a more significant investment, particularly when homeowners are considering upgrading air conditioning, installing solar and battery systems or addressing major drainage problems. With household budgets already under pressure in the lead-up to Christmas, the cost of these improvements can be a reason homeowners delay getting work done.

To help eligible customers manage the upfront expense, Fallon Solutions has partnered with HomePro Credit to offer finance options for qualifying home repairs and upgrades. The current offer includes **$0 upfront, 0% interest and no repayments for the first six months***, subject to eligibility, credit approval and **terms and conditions**.

"Some home improvements are about more than fixing something that's broken. They're about making your home more comfortable, energy-efficient and better suited to your family's needs," Mr Whipps said. "We understand that larger projects can be a significant financial commitment, particularly at this time of year. Having finance options available gives eligible homeowners another way to consider the improvements they've been planning."

Prepare Now, Enjoy the Holidays Later

With the festive season approaching, Fallon Solutions recommends homeowners carry out a simple household review, prioritising safety issues and essential systems before moving on to comfort and efficiency improvements. "Christmas should be about enjoying time with family and friends," Mr Whipps said. "A little preparation now can help reduce the chance of avoidable household problems getting in the way.

Homeowners interested in discussing summer upgrades and available finance options can contact Fallon Solutions on **1300 054 488**

**Finance provided by HomePro Credit, subject to eligibility, credit approval and T&Cs. No interest accrues or repayments are required during the 6-month promotional period. Thereafter, any outstanding balance is repayable over 60 or 144 months at fixed interest rates of 9.99%–16.99% p.a. (comparison rates 7.12%–12.02% p.a.). Comparison rates are based on an unsecured loan of $10,000 over 3 years and may not reflect all fees and charges or other loan terms. Late payment, payment dishonour and other fees may apply.
