

Fallon Solutions Helps Queensland Homeowners Save Thousands with the Cheaper Home Batteries Program - Brisbane, QLD – 11 November 2025

As electricity prices continue to rise, more Queensland homeowners are turning to solar battery storage to take control of their energy costs. Fallon Solutions, one of the state's most trusted home services companies, has helped over 100 households unlock major savings through the Federal Government's Cheaper Home Batteries Program since May this year. With more than 100 batteries already installed and over \$500,000 in rebates secured for customers, the company is empowering families to invest in smarter, cleaner energy backed by expert installation, local service, and more than 60 years of trusted experience.

The Cheaper Home Batteries Program

Currently providing around 30% off the upfront cost of eligible small-scale solar battery systems under the Small-scale Renewable Energy Scheme (SRES). This rebate is scheduled to reduce to approximately 27% after 31 December 2025, meaning homeowners who act now can maximise their savings. Fallon Solutions is helping Queenslanders take advantage of this limited opportunity by offering an additional \$250 discount on top of the government rebate, providing even more value for families looking to reduce energy bills and gain energy independence.

"We've seen a huge surge in demand since the rebate was announced," said Mark Denning, Managing Director of Fallon Solutions. "Queenslanders want energy independence, and this program finally makes quality battery storage affordable for everyday families."

Installing a solar battery can significantly reduce household energy bills. Most Queensland homeowners can expect to cut their grid electricity usage by 50 to 80 percent, saving between \$800 and \$1,500 a year depending on system size and energy habits. By storing excess solar power generated during the day and using it at night, households avoid high evening electricity rates and gain greater energy independence.

Fallon Battery Range

Fallon Solutions installs a range of high performance batteries to suit every home and budget. Tesla Powerwall 3 and Enphase systems are available as premium options for those seeking the highest efficiency and reliability, while Sungrow and BYD provide strong mainstream performance for everyday use. For homeowners seeking a cost-effective solution, GoodWe offers outstanding value without compromising on safety or durability. All systems are installed by Fallon's Solar Accreditation Australia-certified electricians who ensure each project meets the highest standards of safety, compliance, and performance.

Why Use Fallon Solutions For Battery Installation?

With over six decades of service across South East Queensland, Fallon Solutions has built its reputation on reliability, craftsmanship, and customer care. This local presence and long term stability set Fallon apart in a market where more than 700 solar companies have gone out of business since 2011, leaving customers without support or warranties. Fallon customers enjoy peace of mind knowing their installation is backed by a Limited Lifetime Labour Warranty, professional grade roof sealants designed for long term UV stability, and annual Solar System Health Checks available through the company's Black Home Protection Plan membership. Every installation is photographed, quality checked, and completed with the care and attention that has made Fallon a household name across Brisbane, Logan, Morton Bay, Redlands, Gold Coast, and the Sunshine Coast. "Homeowners don't just want cheap solar, they want reliable service and a company that's here to stay," said Scott Sinclair, General Manager Electrical at Fallon Solutions. "We offer both the savings, and the stability Queenslanders can trust."

Homeowners unsure about what system or rebate they qualify for can book a Solar System Health and Battery Rebate Ready Check for just \$99. This in home consultation allows Fallon's experts to assess energy usage, check switchboard and solar capacity, and recommend the best battery and rebate options for each property. It's an easy way to understand what's possible before committing to installation, ensuring customers make an informed decision that suits their household needs and long term energy goals.

Fallon Solutions remains committed to supporting Queensland families with honest advice, professional workmanship, and sustainable home energy solutions. As the Cheaper Home Batteries rebate begins to phase down at the end of the year, the company is encouraging homeowners to take advantage of the current maximum savings before the December 31st deadline and experience the benefits of solar storage for themselves.

About Fallon Solutions

Fallon Solutions is a multi trade home services company servicing Brisbane, Ipswich, Logan, Redlands, Moreton Bay, the Gold Coast, and the Sunshine Coast. With one of Queensland's largest teams of licensed electricians, plumbers, and solar technicians, Fallon delivers end-to-end home energy solutions backed by its Safe Hands Promise and Limited Lifetime Labour Warranty.
